

Ecography

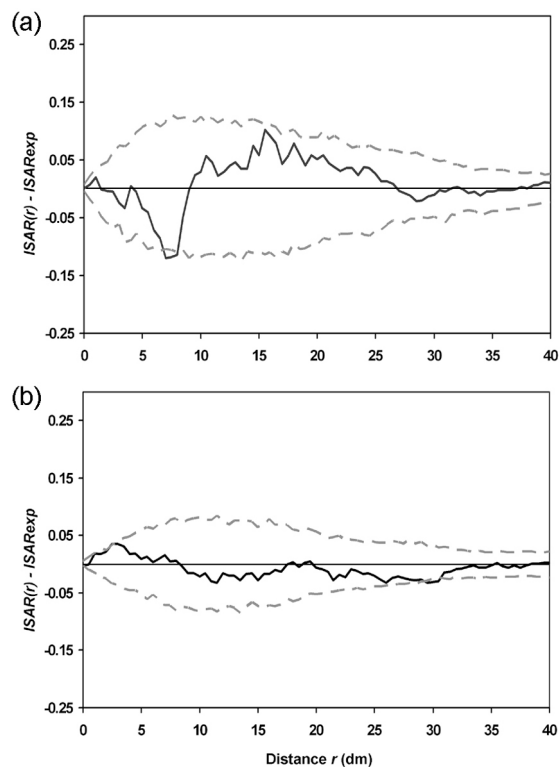

E7058

Rayburn, A. P. and Wiegand, T. 2011. Individual species–area relationships and spatial patterns of species diversity in a Great Basin, semi-arid shrubland. – *Ecography* 34: xxx–xxx.

Supplementary material

Appendix 1

Figure A1. Results of ISAR analyses excluding focal species for (a) *K. lanata* and (b) *A. tridentata* ssp. *wyomingensis*. Bold lines show $ISAR_{obs}(r) - ISAR_{exp}(r)$, the observed ISAR function minus the expectation of the heterogeneous Poisson null model (the average of the ISAR of the 199 null model simulations), grey dashed lines show the simulation envelopes (being the 5th lowest and highest values of the ISAR of the 199 simulations of the null model) minus the expectation of the null model.
