Table A3. Overview of the 136 non-native forests sampled for the regional survey, their latitudes (Lat), longitudes (Lon), habitat types (1 = isolated 10 ha urban/ suburban forest patch, 2 = isolated 10 ha rural forest) and degree of invasion (NO = uninhabited, INV = invaded, HIGH = highly invaded). Forests sampled were classified as uninhabited (species absent), moderately invaded (species present with up to 5 individuals, whatever life-stage) or highly invaded (population established with at least 15 adults).

Species	Country	Region	Site	Latitude	Longitude	Habitat	Degree of invasion
