6 Figure A1. Boxplots of annual survey sampling days per year in spring (a) and fall (b), bottom
7 temperature measurements per year in spring (c) and fall (d), and bottom temperatures per day of
8 year in spring (e) and fall (f) time series. Black bars indicate mean, gray boxes include 95% of
9 range, and whiskers include entire range of data points.

12 Figure A2. Histogram of Species Thermal Index values for the 246 demersal fish and invertebrate

13 species found in the Northeast U.S. Continental Shelf ecosystem and used in this study.

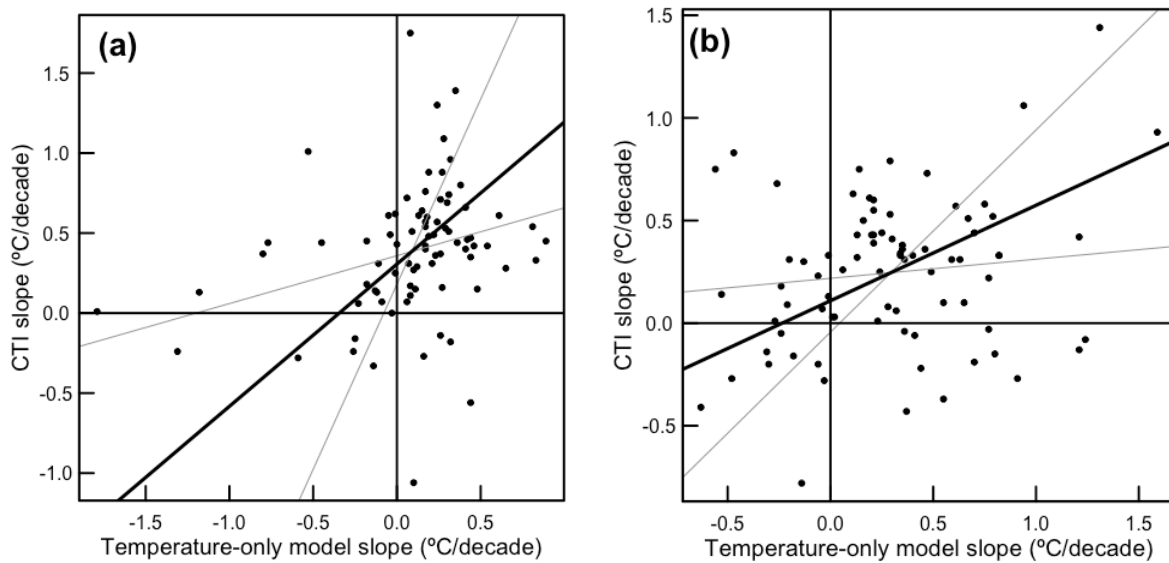

14

15

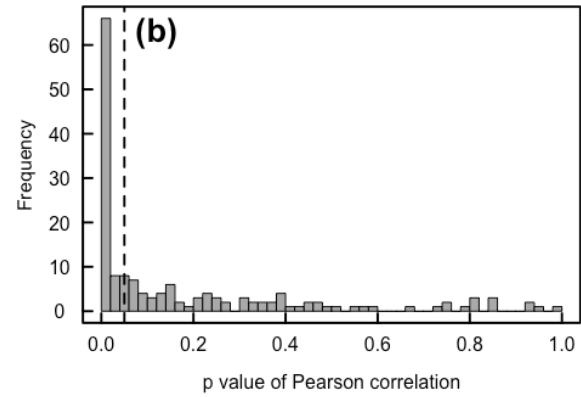

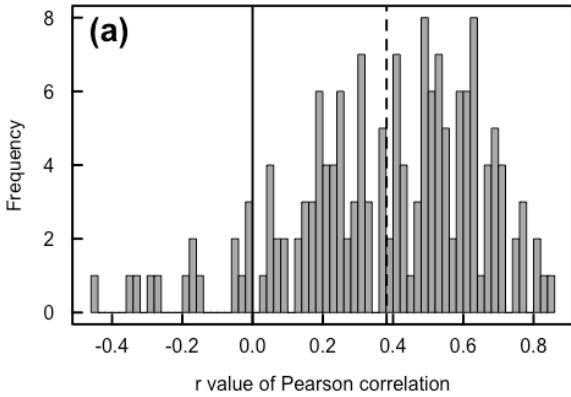

16 Figure A3. Maps of the difference in slopes of long-term trends (bottom temperature slope minus

17 CTI slope) in (a) spring and (b) fall strata.

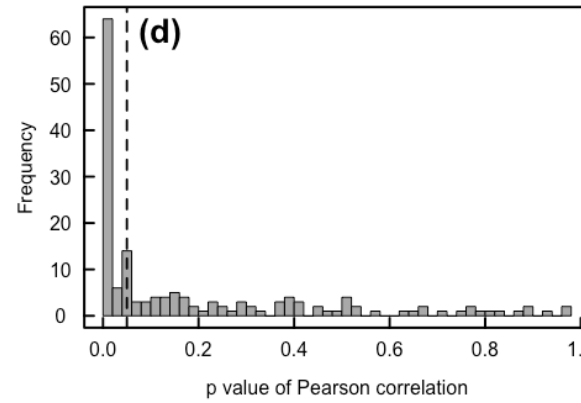

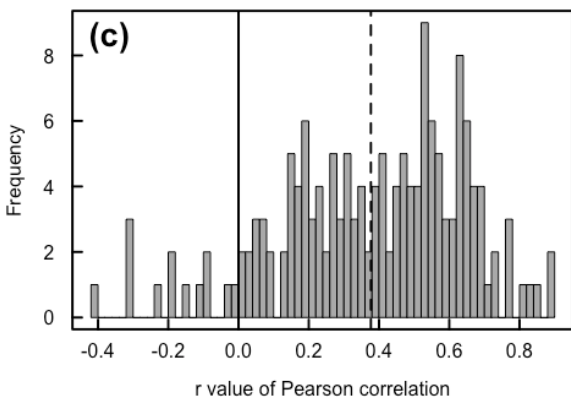

18

19 Figure A4. Model II major axis linear regression between change in temperature-only model CTI
 20 and change in observed CTI in spring (a) and fall (b) communities. Spring slope = 0.88, $r^2 =$
 21 0.066, $P = 0.0223$; fall slope = 0.465, $r^2 = 0.062$, $P = 0.026$.

23

24

25 Figure A5. Pearson's correlations between interannual values of bottom temperature or null
 26 model CTI and observed CTI in each stratum and season. (a) Histogram of r values between
 27 bottom temperature and observed CTI, with dashed line denoting mean ($n = 160$, mean $r =$
 28 0.381). (b) Histogram of P values between bottom temperature and observed CTI, with dashed
 29 line denoting $P = 0.05$ ($n = 160$, $n(P \leq 0.05) = 77$). (c) Histogram of r values between null model
 30 and observed CTI, with dashed line denoting r of 0.5 ($n = 160$, mean $= 0.377$). (d) Histogram of
 31 P values between null model and observed CTI, with dashed line denoting $P = 0.05$ ($n = 160$,
 32 $n(P \leq 0.05) = 75$).

33

34 Figure A6. Histograms of the lag with the highest cross-correlation between detrended time

35 series. Frequency of lags between bottom temperature and observed CTI in (a) spring and (b) fall

36 time series.

37 Table A1. Species temperature index (STI) values for 260 fishes and invertebrates found on the
38 Northeast U.S. continental shelf. STI is the median of the GAM-modeled probability of presence
39 at each temperature from the training dataset (Gulf of Mexico to Labrador). “Trawls” indicates
40 the number of trawls in the testing dataset (Northeast U.S. 1990-2014) where that species was
41 present. Some species are included here because they were present in more than 250 trawls in the
42 Northeast U.S. 1968-1989, even though they did not occur in the testing dataset.
