Assessing year-round habitat use by migratory sea ducks in a multi-species context reveals seasonal variation in habitat selection and partitioning. – *Ecography* doi: 10.1111/ecog.05003

Supplementary material

Figure A5. State-space modeled locations of sea ducks tracked in eastern North America, 2002-2017 (COEI = *dresseri* common eider, WWSC = white-winged scoter, SUSC= surf scoter, LTDU = long-tailed duck, BLSC= black scoter)

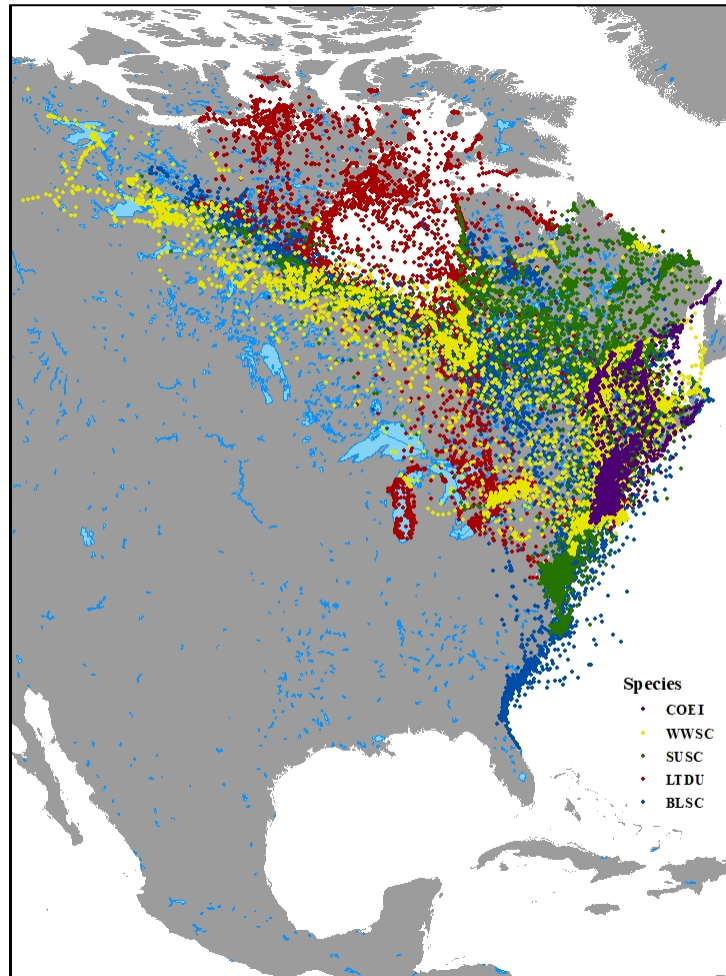

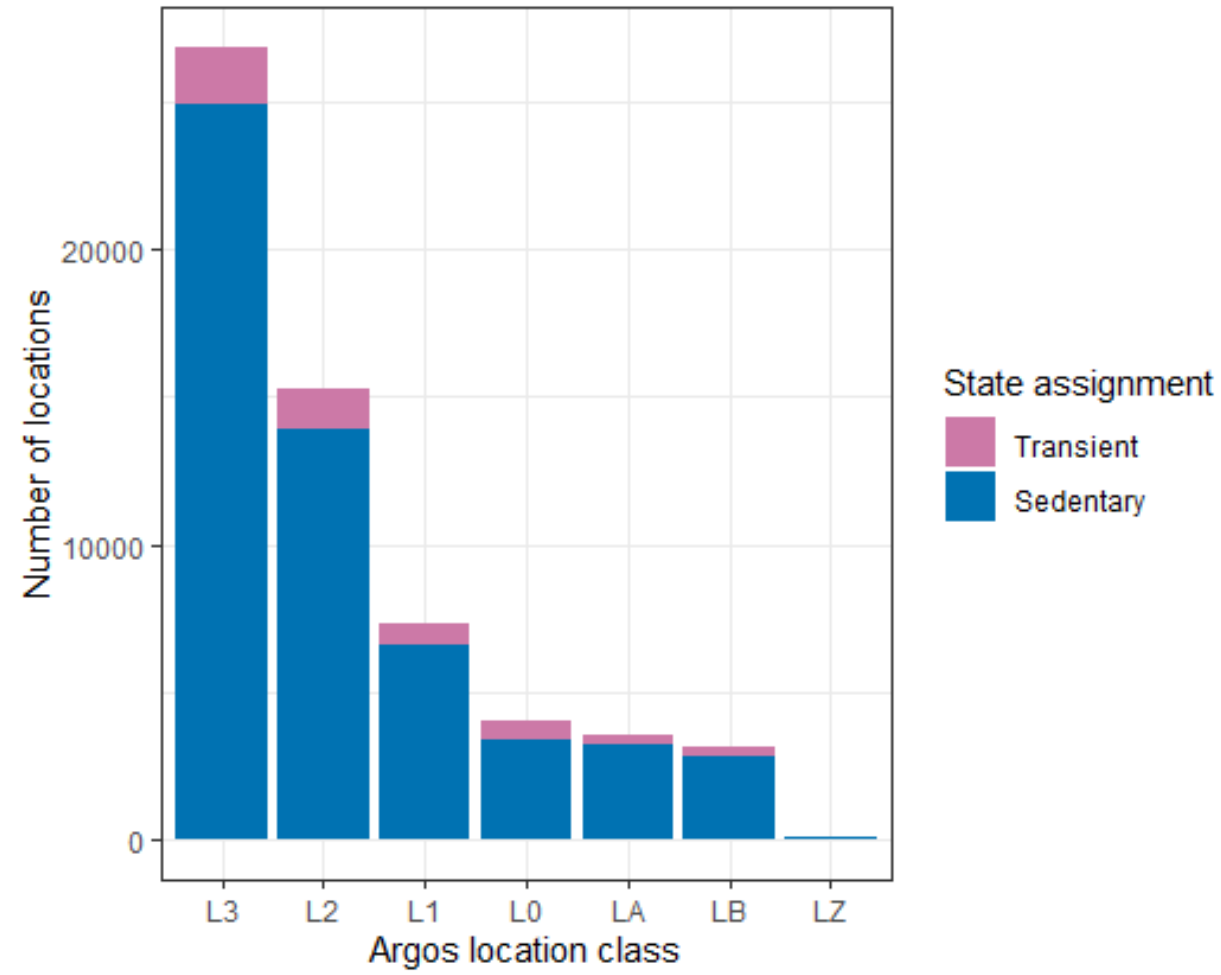

Figure A6. Number of state-space modeled daily locations assigned to transient or resident behavioral states vs. Argos location class of most accurate fix for that day.
